B.Tech (CSE) - Government Engineering College ,Bilaspur (C.G)	8.50 (2024)

PROJECT WORK

PROJECT:Slotify -Online Appointment Booking System

- Developed backend services in Java, using Core Java and OOP principles.
- Created secure, RESTful APIs with Spring Boot for slot generation, booking, and cancellation.
- Managed relational data with SQL for efficient appointment and user-role mapping.
- Designed simple UI mockups with HTML and CSS for testing.
- Utilized Git for version control and GitHub for collaboration.
- Tested API functionality and role-based ac
- cess using Postman.

PROJECT: Mini Mart

- Designed and developed Mini Mart, a responsive online grocery shopping platform using
- JavaScript,
- HTML, and CSS. Built an intuitive UI with a modern design to enhance user experience.
- Implemented
- Ensured seamless navigation with a well-structured layout and interactive elements.across devices

ROLES AND RESPONSIBILITIES

- Designed and developed secure for user , slot management, and appointment handling.
- Implemented JWT for login and role-based access control (Admin, Provider, Customer).Built logic to generate and manage available time slots based on provider schedules.
- Ensured slot integrity using transactional handling and locking to avoid double bookings.
- Applied Spring Data JPA for seamless database interaction with MySQL.
